

Accomplishments

I am happy to have built my own query builder. I also learnt to deploy and manage applications on DigitalOcean, which was a platform that I had been meaning to work with for a while.

User guide

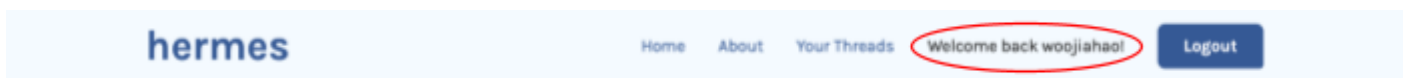

To begin, select the “Login” button in the top right corner.

Then, you can create an account and log in to that account. Both the username and password must start with a letter, contain at least 3 characters, and cannot contain any symbols except for _.

A screenshot of a web application's login/register interface. At the top, a green banner displays the message "Welcome woojiahao. Please login to proceed!". Below this, the form contains two input fields: "Username" and "Password". Both fields have a placeholder text "No spaces, \$, #, !". The "Username" field contains the text "woojiahao". Below the "Password" field, there are two buttons: "Register" and "Login". The "Login" button is blue, while the "Register" button is white with a blue border. Four red arrows with numbers 1 through 4 point to specific elements: arrow 1 points to the "Username" label, arrow 2 points to the "Password" label, arrow 3 points to the "Register" button, and arrow 4 points to the "Login" button.

You will know that you have logged in successfully if you see a greeting in the header.

Once logged in, you can now create new threads, filter existing threads by tags, and search tags by title.

To create a new thread, select the “New Thread” button. You can set the title of the thread, the description (with rich text editing supported through markdown in the backend), and tags. You can create new tags and assign colors to them through the “New Tag” field.

Thread title
Use an interesting and catchy title!

Hello world

Thread content
hermes supports rich text editing!

Tags
Select tags for this thread to be easily identified.

Once created, you will be brought back to the home page where you'll be able to view your newly created threads along with other existing threads, sorted in order of creation.

Assuming that there are more threads created, you can then filter by tags or search by titles.

Search New Thread

Hello world

Hello world!

This is Jia Hao. hermes is intended to be a web forum that allows people to create new threads to start discussions.

By selecting a single thread card, you are able to view the full contents of the thread, along with additional actions. For instance, you are able to vote on a given thread, leave comments, and if you are the original creator of the thread, edit or delete it.

By default, *hermes* comes with an administrator account with the username “admin” and password “root”. There are two key actions that are only accessible to administrators – creating other admins and pinning threads.
